

LEGALMET VERIFY (SIH26036) — FORENSIC AUDIT PASS

# SIH 2026 Forensic Validation & Evidence Audit Report

Standard: Evidence-first, reproducible, provenance-controlled stop-the-line audit | Audit Pass: Read-Only

|                                             |                                            |                                           |
|---------------------------------------------|--------------------------------------------|-------------------------------------------|
| Target Metric: 451 Govt Certificates        | Scrape Reconciliation: 452 rows → 451 PDFs | DB Catalog: 451 DoCA + 3 Seed = 454       |
| Sample Traceability: 38/38 Discrepancy-Free | Security Negative Tests: 7/7 PASSED        | Overall Audit Status: AUDIT PASS COMPLETE |

1. Gate-by-Gate Audit Verdict Matrix

| Gate     | Description                | Verdict | Primary Forensic Evidence                                                            |
|----------|----------------------------|---------|--------------------------------------------------------------------------------------|
| G1 / G2  | Source & Reconciliation    | PASS    | 451 PDFs on disk, 452 CSV entries (cert #137 duplicate index). Exactly 451 parsed.   |
| G3       | Extraction Traceability    | PASS    | 38 deterministic samples matched 100% across PDF, JSON, and SQLite.                  |
| G4 / G5  | Rule Engine & MPE Vectors  | AMBER   | 8/10 vectors passed; substring bug on Class IIII & gram conv on e<1g identified.     |
| G6       | Database Integrity         | PASS    | 0 foreign key violations, strict NULL retention for omitted load-cell models.        |
| G7 / G11 | Security & Authorization   | PASS    | Anonymous, cross-tenant, and path traversal requests strictly blocked (401/403/404). |
| G8       | Workflow Determinism       | PASS    | PASS generates QR cert; FAIL blocks issuance (100% test_flow.py passing).            |
| G9 / G13 | Certificate Hash Forensics | AMBER   | Tamper detection works; key naming alignment ('model' vs 'model_series') noted.      |
| G10      | Metrics Reproducibility    | AMBER   | All core KPIs dynamic from DB; secondary district charts labeled demo data.          |
| G12      | Claims Audit               | PASS    | All claims bounded strictly by measured metrics (451 DoCA certs, 100% native text).  |

2. Detailed Forensic Findings

**Data Integrity:** All 451 PDFs are intact on disk. 451 structured CSV/JSON rows and 451 log rows generated. Missing fields in government certificates: load\_cell\_model (95.5% NULL), approval\_coverage (28.4% NULL), checksum (16.4% NULL). Core fields (Class, Cap, e, Manufacturer) are 100.0% populated.

**Rule Engine:** Implements Seventh Schedule Part-II Table 1 & OIML R 76-1 Table 6. Forensic testing revealed 2 non-critical boundary ambiguities: (1) string matching for 'CLASS III' fires before 'CLASS IIII', and (2) scales with e < 1g require explicit gram conversion logic.

**Security:** Direct API negative tests verified that Trader actors cannot scrutinize applications, cross-tenant object IDs are blocked with 403, and path traversal in PDF streaming is safely rejected.

3. Prioritized RED / AMBER / GREEN Remediation Protocol

| Priority | Component      | Observed Finding & Remediation Action                                                        |
|----------|----------------|----------------------------------------------------------------------------------------------|
| ■ RED    | None           | No blocking flaws. Core flow, database, auth boundaries, and test suite are operational.     |
| ■ AMBER  | Rule Engine    | Reorder accuracy class check to evaluate 'CLASS IIII' before 'CLASS III'.                    |
| ■ AMBER  | Rule Engine    | Normalize interval e < 1.0g (e.g. 0.1g on Class II balances) using explicit unit conversion. |
| ■ AMBER  | Certificates   | Align dictionary keys between verification.py and certificate_generator.py for re-hashing.   |
| ■ AMBER  | UI Dashboards  | Explicitly label the 454 catalog as 451 DoCA scraped certs + 3 verified pilot seed models.   |
| ■ GREEN  | DoCA Ingestion | 451/451 PDFs parsed with vector text extraction, zero OCR fallback, raw files untouched.     |
| ■ GREEN  | Architecture   | Layer A (Statutory Model Approval) and Layer B (Trader In-Situ Asset) strictly separated.    |
| ■ GREEN  | Test Suite     | scripts/test_flow.py passes 100% (PASS & FAIL flows). Frontend compiles with 0 errors.       |

|                                                   |                                         |                              |
